

Les gens d'abord, pas le profit

Étude exclusive : appliqué à 100 médicaments, le modèle Kiwi peut rapporter 632 millions d'euros

En réponse à une question parlementaire du député PTB Raoul Hedebouw, nous avons obtenu les chiffres relatifs à la consommation de 754 médicaments remboursés en Belgique en 2015. La liste reprend tous les médicaments en ambulatoire, classés en fonction de leur coût pour la sécurité sociale. Le coût pour le patient est également indiqué.

- La réponse à cette question est consultable en annexe 2.

À partir de cette liste, nous avons sélectionné les cent premiers médicaments hors brevet pour lesquels le prix payé aux Pays-Bas est inférieur à celui payé en Belgique. Nous avons ensuite comparé le prix d'achat du pharmacien (TVA incluse) entre les Pays-Bas et la Belgique et appliqué le prix d'achat néerlandais au volume total de consommation en Belgique.

En opérant ce calcul, nous obtenons une économie de 632 millions sur un budget total de plus de 1,1 milliard (pour ces 100 médicaments). Cela veut dire que, si nous avons acheté les volumes belges au prix appliqué aux Pays Bas, nous aurions économisé 632 millions sur le 1,1 milliard d'euros dépensés. Pour les patients, le total des dépenses pour ces 100 médicaments s'élève à 230 millions.

Il est important de souligner que, pour ce calcul, nous avons conservé la « marge » absolue des pharmaciens en Belgique.

La différence de prix pour ces 100 médicaments est souvent très élevée. Les 100 médicaments en question sont des médicaments fréquemment prescrits en première ligne. Ce sont ce qu'on appelle des médicaments « hors brevet ». En Belgique, les médicaments hors brevet connaissent une baisse de prix grâce au mécanisme du « *Patent Cliff* ». Notre étude démontre cependant que ces baisses de prix sont beaucoup plus importantes aux Pays-Bas. C'est notamment le cas des médicaments utilisés pour traiter une tension artérielle élevée, des médicaments pour traiter l'asthme, des antibiotiques, des antiacides, des anticholestérol, des antidépresseurs et des antidouleur.

Si on prend l'exemple de l'antiacide omeprazole, on peut voir que le prix d'une même boîte coûte 16,75 € en Belgique contre 1,76 € aux Pays-Bas. Si l'on reprend les chiffres de consommation en Belgique, l'économie qui pourrait être réalisée est d'au moins 50 millions d'euros, puisque ce médicament est fortement consommé chez nous.

- L'intégralité de notre Top 100 est reprise dans l'annexe 1.

Notre calcul reste toutefois une estimation, puisque nous nous basons uniquement sur les dosages et conditionnements les plus fréquemment utilisés en Belgique. Nous avons appliqué les prix en 2017 sur les données de volume en 2015.

Cette étude a été réalisée collectivement par :

Les Drs Berquin Manu, Engelbeen Thomas, Keijzer Roos-lien, Merckx Sofie, Mispelter Lize, O'Brien Stephen, Odeur Nathalie, Palacios Patricia, Vaessen Thomas, Van Bever Karel, Van Duppen Dirk et Wilms Bart.
